SUMMARY

Computer Science & Engineering undergraduate with experience in Python development, React.js, Firebase, OpenCV, and AI-powered applications. Built real-time computer vision systems, AI chatbots, and full-stack web applications using Python, MediaPipe, Streamlit, and Firebase. APIs, authentication systems, and database integration. Seeking Software Developer, Python Developer, or Full Stack Developer opportunities.

CORE SKILLS

Programming Languages: Python, JavaScript

Web Development: HTML, CSS, React.js, Tailwind

Database: MySQL

Libraries: Streamlit, Pandas, NumPy

Tools & Platforms: Git, GitHub

Concepts: Object-Oriented Programming, DBMS, Real-Time Processing

Data Science: Data Analysis, Exploratory Data Analysis (EDA)

INTERNSHIP AND TRAINING

Data Science Intern - SkillOTech Bhubaneswar, Odisha

Training (January 2026 – Present)

- Learned Python programming for data handling and automation.
- Performed data cleaning, preprocessing, and EDA with Pandas, NumPy, and visualization libraries.
- Applied machine learning models, including regression, classification, clustering, and model evaluation techniques.
- Worked on real-world datasets to craft predictive models and generate insights.
- Gained exposure to tools such as Jupyter Notebook, Google Colab, and basic SQL for data querying.

EDUCATION

B.Tech in Computer Science & Engineering

Ajay Binay Institute of Technology, Cuttack | 2022 - 2026 |

12th Science

Odisha Science College, Cuttack | 2020 - 2022 |

10th

Saraswati Shishu Vidya Mandir, Agrahat | 2018 - 2020 |

PROJECTS

Hand Gesture & Voice Control System | Python, OpenCV, MediaPipe, SpeechRecognition

- Developed a real-time computer vision application to control system functions using hand gestures and voice commands.
- Implemented hand landmark tracking and gesture recognition using MediaPipe and OpenCV.
- Integrated voice command processing with SpeechRecognition for hands-free interaction and improved accessibility.

AI Chatbot | Python, Streamlit, Gemini API

- Built an AI-powered chatbot application using Python and Streamlit with Gemini API integration.
- Designed session-based conversational memory to maintain chat context across user interactions.
- Implemented real-time response generation and prompt handling for interactive communication.

Gaming Website | React.js, Firebase, Firestore

- Developed a responsive gaming platform interface using React.js with modern frontend components.
- Integrated Firebase Authentication for secure login and user account management.
- Implemented Firestore database operations for real-time data storage and retrieval.
